MOST IMPROVED PLANT (John H. Samson Award)

CWA Recognition Awards
Compilation of Previous National Winners, 1986 - 2002

The Most Improved Plant Award recognizes those plants which have demonstrated exceptional operations and maintenance improvements through EPA's On-site Technical Assistance Training Program, or other State training programs. The award category is for small, publicly-owned wastewater treatment facilities with a daily effluent discharge of less than 5 million gallons. On-site Assistance Trainers lead the plant staff to address problems in areas such as Clean Water Act non-compliance, operator and staff training and certification, process control and monitoring. The following plants and trainers received national recognition for their achievements. John Samson (deceased) was instrumental in developing the Most Improved Plant award for EPA.
